

1 **Bay Scenario No. 6.** Scenario No. 6 was a 1,000-bbl spill of crude oil released in the
2 tanker land at the east end of Carquinez Strait. The modeled spill was moved by a
3 sequence of winds beginning June 20, 1990, and a flood tide; all spill elements had
4 beached after 12 hours. Most oil from this scenario beached within a few hours of
5 release along the south shore of Suisun Bay from about Pacheco Creek to Middle Point,
6 including the Avon-Port Chicago Marsh.
